Wireless internet at the guest house

At both guest houses you will have free access to wireless internet (WLan).
Although many running systems (Android 4 and upwards) make it quiet easy to get connected to the "eduroam network" (which is used at the guest houses), there are still some running systems which still need the installation of a so called "root certificate".

At our web page, you will find a couple of links. Please check "data center" in order to choose your running system (either computer/(laptop or smart phone/tablet). After you clicked on this link, please follow these instructions:

Computer/Laptop

For getting connected with a laptop or a computer, please choose *"Zugang zum eduroam Netz mit...(Mitarbeiter)"* - choosing your specific running system.
According to your running system, you may need to install the before mentioned root certificate. Please do so, before you are arriving at the guest house.

Smartphone/tablet

For getting connected with a smart phone, please choose "WLAN-Zugang zum Uni-Netz mit ...smartphones" - choosing "Android/Symbian."
According to your running system, you may need to install the before mentioned root certificate. Please do so, before you are arriving at the guest house.

Attention: Windows Phones are not supported at all.

If you need to, you will receive an eduroam username and password after your arrival.
